

# T-DOC Endoscope Module

Our scope of work helps optimize yours

Endoscopes have complex handling and cleaning procedures. This module provides guidance and documentation when performing these tasks. It allows the Central Sterile Department (CSD) to correctly and safely manage the endoscope reprocessing procedures, therefore ensuring optimal performance and established life.

## The T-DOC Endoscope Module

The T-DOC Endoscope Module allows you to maintain a complete overview of the status and location of your endoscopes. By using T-DOC to monitor critical time, CSD departments personnel can select endoscopes that are closest to expire for immediate use, reducing the amount of trays and instruments that need reprocessing.

Combining the T-DOC Endoscope Module with the T-DOC Patient ID Registration Module allows for full traceability. This connects patients with doctors and endoscopes with procedures for a full traceability spectrum. In the unfortunate event of contamination, you can quickly identify all involved parties and take the necessary precautions to contain the spreading of any potentially infectious diseases. The result is increased infection control, improved quality assurance, and enhanced patient safety.

## Key features

- Maintain a complete overview of the exact status and location of endoscopes.
- Define various handling steps and assign them to individual endoscopes or types of endoscopes.
- Maintain a complete overview of endoscope placements and expiry time in drying cabinets with the dryer info overview.
- Automatic alerts if endoscopes deviate from predefined procedures.
- Monitor time intervals between disinfection, drying processing, and the actual use on a patient.
- Create various types of endoscope-based reports.
- Assign custom rules to endoscopes based on product and serial number levels.
- Document LOT number from items such as detergents and cleaning equipment which are commonly used on scopes.

## Minimize the number of expired endoscopes

The T-DOC Endoscope Module allows you to maintain a complete overview of the status and location of your endoscopes. Follow instruments through the dispatch, usage, pre-cleaning, cleaning, and drying stages.

T-DOC provides a complete overview of endoscopes expiry times. Set custom expiration times based on product and serial number levels. Estimate endoscope instruments expiration times based on their type of handling, cleaning, transport, and storage. T-DOC ensures compliance with national standards regarding maximum time intervals, for example, between disinfection, drying, and actual use on patients.

## Complete overview of your endoscopes

The dryer info overview, which is fully configurable, provides quick insight into the location and expiry times of all endoscopes in drying cabinets. It allows first-in-first-out usage, ensuring equipment is being used as efficiently as possible.

Endoscopes located in drying cabinets can be filtered according to a predefined criteria. The dryer info overview is accessible from operating rooms equipped with a scanner station, allowing surgeons to see the endoscopes that are available.

## Ensure correct reprocessing of endoscopes

Creates various reprocessing procedures to ensure that endoscopes are reprocessed according to manufacturer specifications. Department-level settings allow the user to skip handling steps, allowing for flexible workflows that work for your departments. By providing reprocessing guides and steps, the T-DOC Endoscope Module can help to reduce CSD errors and reduce the possibility for infections.

## Deliver on time and save money

The T-DOC Endoscope Module enables timely processing and delivery of case required endoscopes. Financial savings can be achieved by minimizing unnecessary reprocessing of expired endoscopes and by eliminating delays or cancellations of treatments due to missing endoscopes.

## Ensure a high level of quality assurance

The implementation of the T-DOC Endoscope Module allows CSD departments to follow consistent daily work routines by providing reliable documentation of your endoscope processes. T-DOC also ensures that personnel can always access necessary information if and when required.

## Optimize stock levels

The T-DOC Endoscope Module facilitates streamlined use and storage of your endoscopes. When combined with the T-DOC Stock Advanced Module, you can manage endoscopes from different stocks or dispatch to customers from a central location. The result is reduced stock levels and minimal investments in costly endoscopes.

### Combine the T-DOC Endoscope Module with:

- T-DOC Repair Module to manage the sending of endoscopes for repair and service
- T-DOC Patient ID Registration Module to electronically link the patient, the surgeon, and the reprocessed endoscope(s)
- T-DOC Stock Advanced Module to facilitate stock management of endoscopes

T-DOC Endoscope Module is available with T-DOC 2000.
