

MATERIAL SAFETY DATA SHEET

1	IDENTIFICATIO	IDENTIFICATION OF THE PRODUCT AND OF THE SUPPLIER							
1.1	Product:	Value Regulated Lead-Acid (VRLA) Industrial Battery							
	Classification:	Battery, wet, Non-Spillable, electric storage, Class UN2800.							
	Product	Product PS, PG, PSG. PGFT. PSX, OPzV, PSH, PSGL, PHR, DCG, PDC.							
	Relevant	Relevant identified uses:							
	identified	* Product is a source of electrical energy for use with electrical and electronic equipment, Standby:							
	uses of the product	Telecoms; UPS; alarm and security systems; emergency lighting; utility switching Cyclic: Golf Trolleys, portable tools, portable lighting, wheelchairs, remote telemetry Energy storage: Photovoltaic energy							
	and uses	systems (PVES); wind turbines							
	advised	Uses advised against:							
	against	Automotive, commercial, and agricultural SLI applications							
		Reason why uses advised against: High starting and ignition current demands beyond the design of internal and external current							
		carrying components							
	Detail of	Address: Power-Sonic Europe Ltd							
	Supplier:	3 Buckingham Square AUSTRALIA NEW ZEALAND Cotingo Australia Phyllid Cotingo Australia (NZ Pr	anch)

		email: NZ Emergency Tel: +64 9 929 1483							
2	HAZARDS IDEN	-							
	VRLA Battery	*Non-Hazardous:- The VRLA Battery presents no chemical hazards during the normal operation provided our recommendations for handling, storage, transport and usage are observed							
2.1	Classification	*This product does not meet the criteria for classification in any hazard class according to Regulation							
	according	(EC) No 1272/2008 on classification, labelling and packaging of substances and mixtures. However a safety							
	to CLP	data sheet is being supplied for it to meet customer's requirements for similar information.							
2 1 1	Regulation (EC) Additional	The following information is offered for general hazard considerations							
	7.00.0.0.0	Mechanical VRLA Batteries can be heavy. Correct manual handling techniques and/or mechanical							
		lifting aides (e.g. Fork Lift Truck) must be used							
		Electrical VRLA Batteries can contain large amounts of electrical energy which can give high							
		discharge currents and severe electrical shock of the terminals are short circuited.							
		• VRLA Batteries emit hydrogen gas which is highly flammable and will form explosive mixtures in air from approx. 4% to 76%. This can be ignited by a spark at any							
		voltage, naked flames or other sources of ignition							
		 If the battery is broken and the internal components exposed, hazards may exist 							
		which require careful attention.							
2.1.2	* In case of acci	idental damage causing cracks, splits or rupture of the battery case							
		Metallic Lead, Lead alloys and Lead inorganic compounds:							
	Active	• Lead poisoning is usually caused by inhalation of minute particles of Lead fume and dust, which are							
	Materials:	absorbed by the blood stream from the lungs and deposited in the bone marrow. Lead is only slowly released from the bones and thus has an accumulative effect causing chronic poisoning.							
		• TOXIC by ingestion or inhalation of dust, vapour or fume							
		May cause harm to the unborn child							
		Harmful by inhalation and if swallowed Danger of cumulative effects							
	Battery	*Dilute Sulphuric acid							
	electrolyte	Severe IRRITATION and DAMAGE to internal tissues if swallowed, IRRITATION							
	_	of eyes and skin and may cause BURNS and DERMATITIS.							
	Battery case	*ABS (Acrylonitrile-Butadiene-Styrene Copolymer) Standard Grade, UL94:HB & Flame							
	material	Retardant (V0) Grade, UL94:V0. No Hazard in normal use. Material can burn in a fire with toxic smoke and							
		decomposition products.							
	Separator	*Absorbent Glass Matt (AGM) Separator The fibres may cause IRRITATION to skip or ever upon exposure, and to internal tissues if inheled or swallowed							
	material	The fibres may cause IRRITATION to skin or eyes upon exposure, and to internal tissues if inhaled or swallowed.

Inorganic lead and battery electrolyte (Dilute Sulphuric Acid) are the main components of VRLA batteries. Other substances may be present but in small amounts dependant on battery type. Contact Power-Sonic Europe Ltd for further information

FIRST AID MEASURES

This information is of relevance only if the VRLA Battery has suffered damage, is broken and persons have direct contact with the internal components

	Components		Action
4.1	Plate Grids and	Inhalation:	Remove the person from exposure to fresh air.
	Active Materials		Seek advice from a medical doctor
		Ingestion:	Wash out mouth with water and give plenty of water to drink. Do not induce
			vomiting. Seek advice from a medical doctor
		Skin Contact:	Wash off with plenty of water and soap to prevent accidental ingestion or
			inhalation. Seek medical advice if pain or rash does not reduce
		Eye Contact:	Immediately irrigate with eyewash solution or clean water for at least 10 minutes,
		'	holding the eyelids apart. Then take the person to hospital without further delay
		Self-protection:	Eye protection (safety glasses or face shield), and heavy-duty gloves are required.
		for the first aider	In case of inhalation, a face mask or respirator may be required
4.2	Battery Electrolyte		SPEED IS ESSENTIAL - OBTAIN IMMEDIATE MEDICAL ATTENTION
		Inhalation	Remove the person from exposure to fresh air.
			If the person continues to feel unwell seek advice from a medical doctor
		Ingestion	Wash out mouth with water and give plenty of water to drink. Do not induce
			vomiting. If the person continues to feel unwell seek advice from a medical doctor
		Skin Contact:	Drench *the area with large quantities of water.
			Remove contaminated clothing and place in water to dilute the acid
			Continue to wash the affected area for at least 10
			minutes. Seek advice from a medical doctor
		Eye Contact:	SPEED IS ESSENTIAL - OBTAIN IMMEDIATE MEDICAL ATTENTION
			Immediately irrigate with eyewash solution or clean water for at least 10 minutes, holding
			the eyelids apart. Then take the person to hospital without further delay Eye protection
		Self-protection	(safety glasses or face shield), and heavy-duty gloves are required. In case of inhalation, a
		for the first aider	face mask or respirator may be required.

¹ For full text of Hazard Statements (H-No's) see SECTION 16

MSC013 Rev 6 05/18

4 This i	FIRST AID MEASURES Conformation is of relevance		y has suffered damage, is broken and persons have direct contact with the internal
4.3	Case Material	Inhalation	Material can burn in a fire with toxic smoke and decomposition products Upon inhalation of decomposition products, keep patient calm, remove to fresh air, and seek advice from a medical doctor. If a large quantity is inhaled take the person to a hospital. Note to physician: Treat according to symptoms (decontamination, viral functions), no known specific antidote
		Ingestion	Wash out mouth with water and give plenty of water to drink. Do not induce vomiting If the person continues to feel unwell seek advice from a medical doctor
		Skin Contact:	Areas affected by molten material should be quickly placed under cold running water and a sterile protective dressing applied. Seek advice from a medical doctor.
		Eye Contact:	May cause irritation or injury due to mechanical action and traces of Battery Electrolyte. Immediately irrigate with eyewash solution or clean water for at least 10 minutes holding the eyelids apart. Then take the person to hospital without further delay
		Self-protection for the first aider	Eye protection (safety glasses or face shield), and disposable gloves are required. In case of inhalation, a face mask or respirator may be required.
1.4	Separator Material	Inhalation	Remove patient from exposure to fresh air. If irritation persists, seek advice from a medical doctor
		Ingestion	Wash out mouth with water and give plenty of water to drink. Do not induce vomiting. If the person continues to feel unwell seek advice from a medical doctor.
		Skin Contact:	After contact with skin, wash immediately with plenty of soap and water. If irritation persists, seek advice from a medical doctor
		Eye Contact:	May cause irritation or injury due to mechanical action and traces of Battery Electrolyte. Immediately irrigate with eyewash solution or clean water for at least 10 minutes holding the eyelids apart. Then take the person to hospital without further delay
		Self-protection	Eye protection (safety glasses or face shield), and disposable gloves are required.
;	FIRE-FIGHTING AND EXPL	for the first aider	In case of inhalation, a face mask or respirator may be required.
	VRLA Battery	General Information	VRLA Batteries emit hydrogen gas which is highly flammable and will form explosive mixtures in air from approx. 4% to 76%. This can be ignited by a spark at any voltage, naked flames or other sources of ignition.
			Batteries in use will be part of an electrical circuit and must be isolated from the power source before attempting to put out a fire. Switch the power OFF before disconnecting the batteries from the power source.
			Damaged batteries may expose negative plates, grey in colour, which may ignite if if allowed to dry out. These plates may be wetted down with water after the battery has been removed from all electrical circuits.
.1	*Extinguishing Media	Suitable	CO ₂ ; Foam; Dry Powder
		extinguisher types:	
		Unsuitable extinguisher types:	Water extinguishers must never be used to put out an electrical fire.
5.2	*Special hazards	Hazardous combustion & decomposition products:	Carbon monoxide, Sulphur Dioxide, Sulphur Trioxide, Lead fume and vapour, toxic fumes from decomposition of battery case materials
5.3	*Advice for firefighters		Full face visor or safety goggles; Respiratory equipment or self-contained breathing apparatus (SCBA); Full acid resistant protective clothing must be worn in fire-fighting conditions

Note: If appropriate refer to Sections 8 and 13

MSC013 Rev 6 05/18

Components		
VRLA Battery	*General Information:	VRLA batteries are designed to be safe to handle and not to leak battery electrolyte under normal conditions. In case of accidental damage heavy-duty gloves are required to pick-up the battery to protect against unseen electrolyte leakage *and sharp components
Plate Grids and Active Materials	Personal Precautions:	Eye protection (safety glasses or face shield), and heavy-duty gloves are required. If the material is wet, a face mask or respirator is not required If the material is dry, a face mask or respirator is required
	Environmental Precautions:	Do not allow material to enter a watercourse. Exposed Lead *compounds must be placed in an inert sealed container (e.g. self-seal plastic bag or bucket) for disposal, see Section 13.
	Methods & material for containment and cleaning up:	Large, solid pieces may be picked up and bagged for recycling. Never use a brush to sweep up debris; it may create Lead-dust in the air. Wet clean the spill area to remove all traces of debris. Battery debris and cleaning materials must be collected and placed in an inert sealed container (e.g. self-seal plastic bag or bucket) for disposal, see Section 13.
Battery Electrolyte:	Personal Precautions:	Ensure suitable, acid resistant personal protective clothing (including heavy duty gloves, safety glasses and respiratory protection) is worn during removal and clean-up of spillages.
	Environmental Precautions:	Battery electrolyte must not be allowed to enter any drains or sewage system or water course.
	Methods & material for containment and cleaning up:	Small spillages: Neutralise and absorb the spillage using soda ash, sodium bicarbonate (available from supermarkets), sodium carbonate or calcium carbonate powder. Wet clean the spill area to remove all traces of debris. Battery debris and cleaning materials must be collected and placed in an inert sealed container (e.g. self-seal plastic bag or bucket) for disposal, see Section 13. Large spillages: Large amounts of electrolyte spillage are unlikely with VRLA batteries since the electrolyte is fully absorbed in the active materials and separator. Bund the spillage area using dry sand, earth, sawdust or other inert material. Neutralise the electrolyte using soda ash, sodium bicarbonate (available from supermarkets), sodium
Case Material:	Clean-up Methods:	carbonate or calcium carbonate powder. Wet clean the spill area to remove all traces of debris and electrolyte. Cleaning materials must be collected and placed in an inert sealed container (e.g. self-seal plastic bag or bucket) for disposal, see Section 13. Assume battery case material is contaminated and proceed as for Plate Grids
	·	and Active Materials above
Separator Material:	Clean-up Methods:	Assume *separator material is contaminated and proceed as for Plate Grids and Active Materials above.

Note: If appropriate refer to Sections 8 and 13

HANDLING AND STORAGE					
Component:		Action			
VRLA Battery	Precautions For Safe Handling:	Only trained operators should be allowed to handle VRLA batteries. *CAUTION: Batteries are 'live' at all times: there is no "ON" / "OFF" switch.			
		PPE : No specialist protective clothing or equipment is required, except that for handling heavy weights. *It is good practice to wear safety footwear.			
		Hygiene: There are no specialist requirements beyond good, standard workplace practices: *no smoking; no eating; wash hands before eating.			
		Mechanical lifting aides: (e.g. FLT and pallet trucks) will be required to move pallets of batteries. Weight approximately 1 tonne.			
		Mechanical handling aides: (e.g. trucks and lifters) will be required to handle individual batteries over 25 kg in weight.			
		General Safety Considerations: Do not drop batteries: dents and deformation of the case may be an indication of internal damage to the battery. Cracks will allow electrolyte to escape. Do not place VRLA Batteries lid-to-lid so that terminals will short-circuit.			

Note: If appropriate refer to Sections 8 and 13

	HANDLING AND STORA		
'.1 ont.	VRLA Battery	Conditions For Safe Storage, Including	Store under a roof and protect against direct sunlight and adverse weather conditions including rain, snow and other sources of water.
		Incompatibilities:	Storage of large quantities of VRLA batteries may require approval from local environmental protection agency and/or local water authorities.
			Pallets of VRLA Batteries are heavy. Store at ground level or in lower levels of storage
			systems (e.g. racking).
			Take special care in dry conditions to avoid the risk of electrostatic discharges.
			Protect against physical damage and exposure to organic solvents and other
			incompatible materials.
			Do not store VRLA batteries close to sources of heat, naked flames and sparks.
			Store batteries in their original packaging wherever possible. When batteries are removed from their original packaging (e.g. for transportation of small quantities), ensure new packaging protects the batteries from damage and the risk of short-circuit of the terminals.
			Ensure battery storage and top-charging areas are well ventilated. *DO NOT PLACE VRLA INDUSTRIAL BATTERIES IN A GAS-TIGHT ENCLOSURES DURING STORAGE, TRANSPORT OR USAGE.
			Ensure batteries are removed from equipment at the end of life and are collected for
			recycling by an approved contractor.

11	TOXICOLOGICAL INFOR	MATION	
his i		only if the VRLA Battery has suffered damag	ge and is broken
1.1	VRLA Battery		This information does not apply to the undamaged VRLA Battery. It is of relevance if the battery is broken and the components are released to the environment. Exposure limits may vary according to national law and regulations.
11	TOXICOLOGICAL INFOR	 RMATION Continued	regulations.
11.2	Plate Grids: Metallic Lead, Lead alloys	Toxicity	 Toxic by ingestion or inhalation Chronic poison Lead is a poison that affects virtually every system in the body Symptoms include fatigue, headaches, constipation, aching bones and muscles, gastrointestinal tract disturbances and reduced appetite Blood Lead levels of 80 μg/dl and above have been associated with both acute and chronic effects of Lead poisoning
1.3	Active materials: Lead dioxide.	Toxicity	 Toxic by ingestion or inhalation Chronic poison Chronic exposure to Lead compounds may lead to a build-up of Lead in the body, giving rise to a variety of health problems, including anaemia, kidney and liver damage, impaired eyesight, memory loss and CNS² damage
1.4	Battery Electrolyte:	Dilute Sulphuric Acid	Corrosive, the more concentrated solutions can cause serious burns to the mouth, eyes and skin Harmful by ingestion and through skin contact
		Inhalation:	Mist is a severe irritant to the respiratory tract. Fluid build up on the lung (pulmonary oedema) may occur up to 48 hours after exposure and could prove fatal
		Ingestion:	Will immediately cause severe corrosion of and damage to the gastrointestinal tract.
1.5	Battery Electrolyte:	Skin Contact:	Causes severe chemical burns
1.6		Eye Contact:	Risk of serious damage to eyes. Causes severe burns. May cause prolonged or permanent damage or even total loss of sight. Mist will cause irritation
1.7	Case Material:	*	According to information available the product is not harmful to health provided it is correctly handled and processed according to the given recommendations.
	Separator Material:		Based on animal implantation and epidemiologic studies glass microfibers are thought to have some limited carcinogenic potential and as such are designated as Group 2B materials (IARC, US). The material should be treated as a category 3 carcinogen (Europe). Limited evidence of carcinogenic effect.

MSC013 Rev 6 05/18

3	DISPOSAL CONSIDERA		
3.3	Battery Electrolyte:	Europe	 Disposal must be carried out in accordance with the European Hazardous Waste Directive 2008/98/EC on the protection of the environment through criminal law
		Worldwide General	 Disposal should be in accordance with local, state or national legislation. Battery electrolyte is dilute Sulphuric Acid, the strength of which depends on the state of charge of the batteries. It must be neutralised before disposal. See Section 6 for clean-up and disposal advice.
3.4	Case Material:		 Do not dispose of this product into sewers, any ocean or water course in order to prevent marine animals and birds from ingesting. Recycling is encouraged. Disposal by controlled incineration or source landfill in accordance with local national laws and regulations may be acceptable
3.5	Separator Material:		 Constitutes a special waste by virtue of hazardous substance content. Dispose of via approved landfill site. Disposal by controlled source landfill in accordance with local national laws and regulations may be acceptable.
	TRANSPORT INFORMA	TION	·
	Components		
	VRLA Battery	Land Transport	Land Transport (ADR / RID) • UN No: UN2800 • Classification ADR / RID: Class 8 • Proper Shipping Name: BATTERIES, WET, NON-SPILLABLE electric storage • Packing Group ADR: not assigned • Tunnel code: E • ADR / RID: New and spent (used) batteries are exempt from all ADR /RID SP 598)
		Sea Transport	Sea transport (IMDG Code) • UN No: UN2800 • Classification: Class 8 • Proper Shipping Name: BATTERIES, WET, NON-SPILLABLE electric storage • EmS: F-A, S-B Non-Spillable batteries meet the requirements of Special Provision 238; they are exempt from all IMDG codes and are not subject to special regulation for sea Transport
		Air Transport	Air Transport (IATA-DGR) • UN No: 2800 • Classification: Class 8 • Proper Shipping Name: BATTERIES, WET, NON-SPILLABLE electric storage • Special Provision A48: Packaging test are not considered necessary • Special Provision A67: Power-Sonic's VRLA batteries meet the requirements of Packing Instruction 872. The battery has been prepared for transport so as to prevent: a) A short-circuit of the battery's terminals by packaging in a strong and sturdy carton box; AND/OR b) The battery has been fitted with an insulating cover (made from ABS) which prevents contact with the terminals. c) Unintentional activation is thus prevented The words "NOT RESTRICTED" and the Special Provision (SP) number must be indicated on all shipping documents • Special Provision: A164: The battery has been prepared for transport so as to prevent: a) Short-circuit of the battery's terminals by packaging in a strong and sturdy carton box; AND/OR b) The battery has been fitted with a cover (made from ABS) which prevents contact with the terminals c) Unintentional activation is thus prevented
		All methods of transport:	DO NOT PLACE VRLA BATTERIES INSIDE SEALED OR GAS-TIGHT ENCLOSURES VRLA Batteries emit hydrogen gas which is highly flammable and will form explosive mixtures in air from approximately 4% to 76%. This can be ignited by a spark at any voltage, naked flames or other sources of ignition

Hazard Statements (H-Statements) Harmful in contact with skin Harmful if swallowed Toxic by inhalation Toxic in contact with skin Toxic if swallowed Causes severe burns Irritating to eyes Irritating to respiratory system Irritating to skin Suspected of causing cancer		

16.5	Training Advice	 Only trained, competent personnel, who have received special instructions for the hazards and risks, should be allowed to handle VRLA Batteries. See Section 7.1 for general advice
		To ensure the safe use of VRLA Industrial Batteries supplied by Power- Sonic, the following precautions must be observed: • Never short-circuit battery terminals, since sparks and arcs produced can injure personnel and are a fire and explosion hazard. • Batteries must always be charged on a voltage-regulated charging system with adequate ventilation provided to avoid the build-up of ignitable gases and to promote good heat dissipation. • Do not charge VLRA Batteries above + 50 °C, discharge or store above + 60 °C. • Under extreme conditions of charging equipment malfunction and/or battery failure, high voltage and high temperature conditions may occur causing the evolution of Hydrogen Sulphide (H ₂ S) gas, which is toxic. If detected by its odour of rotten eggs (at extremely low concentrations), switch off the charging equipment, evacuate all personnel from the area and ventilate well. Seek advice before attempting to re-start charging.
