

GETINGE LAUNCHES FAST NEW STERILIZER

Following last year's successful introduction of a turbo washer-disinfector that cuts cycle times in half, Getinge is now launching a turbo sterilizer.

The new machine – called the Getinge HS66 Turbo+ sterilizer – is our fastest sterilizer ever, cutting sterilization cycle times by some 35%, depending on the type of load. This enables a substantial increase in throughput and significantly reduced turnaround times. As a result, hospitals and clinics can meet their needs with fewer sterilizers and thus cut their total costs.

Getinge HS66 Turbo+ achieves this with the same or even lower utility consumption compared to standard sterilizers. Moreover, it has a smaller footprint, making it easier to fit in where needed.

“We are of course pleased to be able to offer this high-speed sterilizer,” says Stefan Runnström, Product Manager at Getinge Sterilization, “especially since it will enable our customers in the healthcare sector to meet their sterilization needs with fewer sterilizers. And that in turn reduces the total environmental impact.”
