

T-DOC Select

Supporting a structured and efficient sterile workflow

T-DOC Select is a future-proof solution designed for today's CSSDs with a strong focus on workflow optimization and operational efficiency. T-DOC Select is an easy-to-use solution that allows you to improve, enforce and document the processes within sterile supply management.

Accuracy and consistency

T-DOC empowers the CSSD with regulatory, operational, statistical and production data. The clear and auditable data can be quickly accessed any time and can be used to make data-driven decisions, document regulatory compliance and perform recalls if necessary.

T-DOC supports an accurate and consistent workflow by providing staff with clear and image driven instructions in reprocessing, packaging and distribution. Furthermore, T-DOC informs staff which instruments and trays to use first based on expiry date, which reduces time-consuming and costly re-sterilization.

Key features

- Ensures a consistent and high-quality production that decreases risk for patients and staff
- Reduces time-consuming and costly re-sterilization
- Accurate reporting tool provides a wide range of reports allowing for production optimization
- Efficient resource allocation and budget planning
- Provides accurate recall information of patient-instrument interaction
- Meets regulatory and hospital requirements

Unsurpassed quality and safety

In any T-DOC-enhanced hospital, patients can feel confident about production quality and infection control adherence. T-DOC helps keep the risk of hospital-acquired infections to a minimum, and enables hospital staff to identify patients impacted by a supply recall. And because it optimizes the entire sterile process, T-DOC ensures staff know exactly when and where to find required instruments, trays and disposables.

Maximize your return on investment

T-DOC directly impacts savings in the hospital's sterile supplies when it comes to time saved searching for instruments and trays and managing instrument maintenance and repairs. T-DOC ensures fewer manual processes and allows for prioritization of instruments and trays, which ultimately leads to less time spent managing non-conformance and quality issues.

Enforce regulatory compliance

With T-DOC you get full traceability of instruments and their reprocessing to ensure full regulatory compliance and the highest levels of quality assurance and patient safety. T-DOC also delivers complete process documentation from decontamination all the way to the patient at both tray and instrument levels. By ensuring each important step in the reprocessing cycle is enforced, the system provides you with electronic and historical documentation for regulatory compliance.

Ensure correct handling

T-DOC allows for use of warning messages and reminders by using triggers, for example, whenever a product requires special attention. Triggers help ensure correct handling as staff is alerted at the right time and/or at the right production area/location. Triggers also support staff for training purposes and instrument maintenance, as triggers can include pictures, sound and video when combined with the T-DOC Multimedia Module.

Accurate and valuable reporting tool

T-DOC Select offers reports ranging from staff and department productivity, value of inventory, instrument loss and repairs, and many more.

Easily upgradeable should your needs change

T-DOC Select is a future-proof investment and can easily be upgraded to the advanced T-DOC 2000 solution. T-DOC 2000 can interface to operating room, materials management, patient and finance systems making T-DOC an essential part of any hospital. Additionally, adding RFID, Automation and Robotics solutions optimize the workflow with greater operational excellence.

A greater array of modules opens the opportunity to communicate across locations, handle multi-site facilities, automatically prioritize next day needs and provide more accuracy and accountability pre- and post- surgery.

Flexible training options

Getinge will assist you with the necessary training and supervision to ensure that users are equipped to use and manage the solution in the optimal way. It can be either classroom training at Getinge's regional training centers, on-site trainings in customer's own environment, e-learning, or a combination. From basic and advanced standardized product training to courses that are tailored to meet your specific needs.

Support whenever you need it

We believe maintaining the relationships developed with our customers during implementation is important to your ongoing success with T-DOC. Our support team members are here to ensure you receive the ongoing support, upgrades, updates and technical guidance you need, whenever you need it. Ultimately, you are ensured increased uptime, disruption-free production at a fixed maintenance cost, and the best possible condition to succeed with T-DOC.
