

T-DOC Case Cart Solution

T-DOC Module Description

The T-DOC Case Cart solution enables you to optimize the ordering of instruments and improve workflows using ready-made case carts to ensure just-in-time delivery of instruments. Association of LOT numbers to patient cases are easily managed in T-DOC.

The T-DOC Case Cart Solution

Allows the capabilities to implement just-in-time delivery of case carts. T-DOC capabilities provide centralized stock management and real-time information on instrument locations, while maintaining accuracy and full traceability of individual items.

Time savings and improved turnaround times of your instruments translates directly to more cases performed with each set, tying directly to cost savings for the hospital.

Additionally, T-DOC provides step by step work procedures, which enables you to increase infection control, improve quality assurance and enhance patient safety.

Key features

- Allow trays, single instruments and disposables to be temporarily associated with a case cart. This allows you to scan only one barcode per case cart instead of having to scan all items individually.
- Ensure complete traceability by linking used articles to a patient. This includes registering relevant data to his or her operation, for example, use of implants and their associated LOT numbers.
- Create and manage dynamic preference lists, listing the required instruments and disposables to prepare optimized case carts for an operation.
- Ensure optimal information sharing between T-DOC users about the ordering of instruments, delivery of case carts and more, regardless of their location.
- Provides the CSSD with an orders needs list overview showing information about upcoming operations within a specified time frame.

Centralize stock management

The complete ordering process of instruments and disposables can be managed directly from T-DOC, regardless if instruments are placed on different stock or already dispatched to an OR. Non-sterile goods are available in real-time, as needed.

Just-in-time delivery of ready-made case carts for scheduled operations

T-DOC's dynamic preference list enables you to prepare case carts containing exactly the instruments, implants and disposables needed for specific operations. The article substitution assists CSSD personnel in defining the case cart by grouping identical goods and defining alternative products, thus allowing CSSD personnel higher flexibility when picking goods.

Furthermore, T-DOC can plan all operations, either within T-DOC, or by using an interface to a hospital operation scheduling system, enabling you to have optimal planning of your cases and case cart.

Auto notification push

With T-DOC, you can set up automatic, custom, action based notifications. These features allow for quick access to relevant information, thereby saving time and improving on OR process efficiency. The "orders needs list" overview gives CSSD staff a quick insight into upcoming operations within a specified time frame, providing enough notice for necessary case instruments.

Deliver on time and increase hospital earnings

The T-DOC Case Cart Solution provides you with the functionalities to implement just-in-time delivery of case carts for scheduled operations. These efficiencies account for significant time savings and improved turnaround times of your instruments, allowing you to increase the number of cases performed per OR. Over the course of a year, the additional time an OR is in use translates directly to revenue earned.

Assure the highest level of infection control

Managing case carts with T-DOC enables you to increase the focus on infection control as you minimize the number of times that personnel has to touch/move sterile goods to an absolute minimum. Added benefits of implementing T-DOC include reducing unnecessary traffic in and out of the operating room to ensure that case carts contain the right instruments, implants, and disposables for the scheduled operation. This will save you significant time in the operating room, leaving you more time to focus on what is really important — the patient.

A T-DOC Case Cart Solution includes the following T-DOC modules:

- · T-DOC Basket Module.
- T-DOC Messaging Module.
- T-DOC Stock Management Advanced Module (this includes the T-DOC Stock Management Basic Module).
- T-DOC Operation Module (this includes the T-DOC Patient ID Registration Module).

The T-DOC Case Cart Solution is available with T-DOC 2000.
