# Getting The Most Out of Your T-DOC Solution

Connecting CSSD & OR

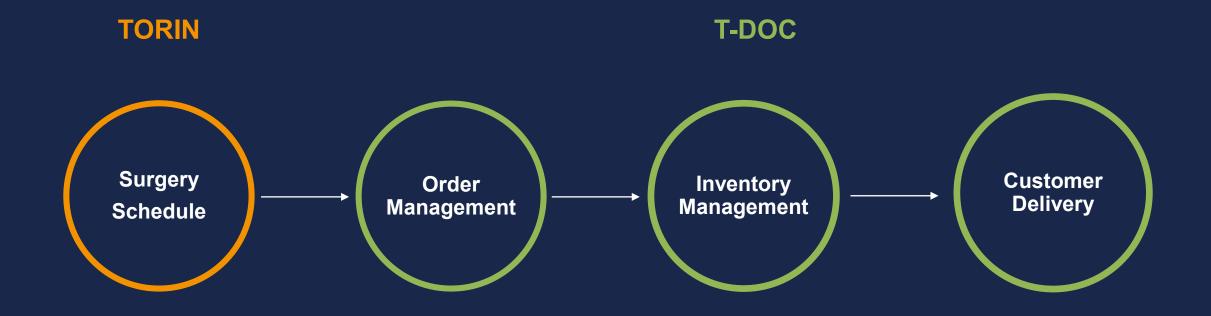

## Bringing OR and CSSD together with TORIN & T-DOC

## **Streamlined Work Environment**

Continuous monitoring of the surgery schedule, orders and availability

## How it can help

## **Torin OR Management** Efficient planning, management and

optimisation of your surgical department

## **Torin – Surgery Planning**

User-friendly surgery planning and visual overviews

### **Surgery planning**

- Long-term capacity and resource planning
- Customisable booking templates
- Color-coded surgery schedule
- Adjustable surgery schedule
- Resource and conflict checking
- Assignment of surgery staff

### Integrations

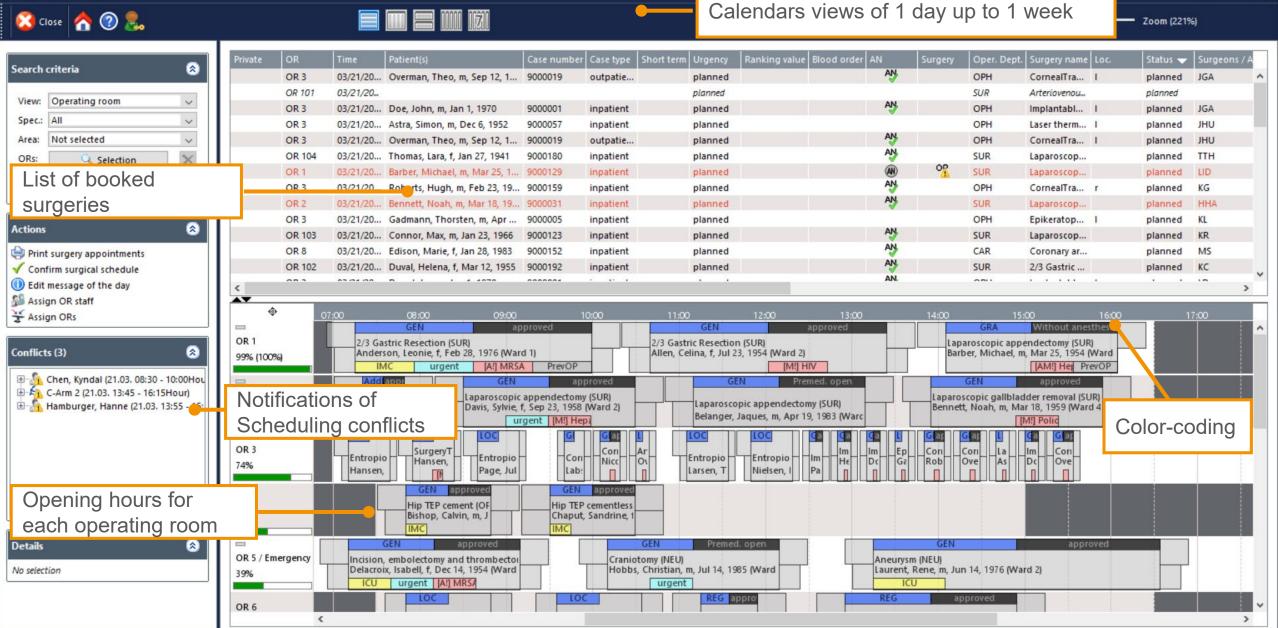

- Order interface with T-DOC
- Leverage existing data from EMR

## 

### Tr Surgery calendar Edit View Window Help

- 0 ×

GETINGE 🛠

## **Torin – Real-time Progress**

On-time execution and complete documentation of all surgery steps

### Improved coordination

- Real-time updates of surgery progress
- Clearly assigned staff responsibilities
- Visualization of surgery patient readiness
- SmartView provides ongoing surgery information from a digital door sign outside the OR

### **Complete documentation**

- Standard checklist for comprehensive surgery documentation
- Registration of all steps in the surgical patient flow

### Integration

• Bidirectional interface to T-DOC

## GETINGE 🛠

## **Torin – Department Optimization**

AI and Business Intelligence for Increased Theatre Utilisation

### **Optimization of the surgical flow**

- Al prediction of surgery times
- Manage surgical waiting lists
- Real-time visualizations of department KPIs
- Graphic Business Intelligence for advanced data analysis
- Ordering of patient and equipment transports
- Customizable screen configuration

### Integrations

Data interface to existing Data Warehouse solutions

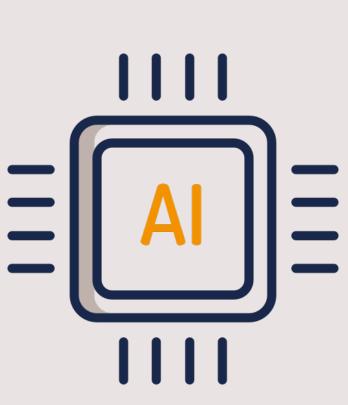

## 

## **Torin Optimization**

Using AI for a better prediction of surgery times

Input

- Historical OR data
  - Torin has learned from 120.000 surgical records
- Variables used by the machine learning algorithm
  - Surgery type
  - Patient and clinical data
  - Staff experience

## Outcome

- Predicted surgery times by surgery type
- Increased accuracy of OR schedule
- 5-40%\* improved predictions vs human
- Displays which variables have influenced the surgery times by which degree

\* Based on internal studies with a pilot customer

## **Torin Optimization**

Optimize surgical waiting lists

- Ranks the surgical backlog by complex calculations based on clinical and resource parameters
- Proposes an optimized pre-schedule
- Block utilization
- Verify the results for each day of the upcoming weeks
- Reduce the surgical backlog in an efficient way according to available capacities

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |               |    |

GETINGE 🗱

## **Torin Optimization**

Graphic Business Intelligence for advanced data analysis

- On-screen filter options
- Ratio of elective versus acute surgeries
- Comparison of procedure duration for each surgery type
- Overview of total surgery hours across ORs today

GETINGE 🛠

## **TORIN OR Management**

Key differentiators

Prediction of surgery times with Al

Waiting list management

Conflict checking & Resource Management

Average cost to run a Operating Theatre = \$ 130 /min

If Torin can make each Theatre only 5 minutes more productive a day

 $5 \min x 4 \text{ OR } x 5 \text{ days } x 50 \text{ weeks}$ x \$130 = \$ 650,000 per year

GETINGE 🛠

## T-DOC Sterile Supply Management

Improved traceability, utilization and logistics of surgical supplies

## Managing the sterile supply flow in the entire hospital

GETINGE 🛠

## T-DOC ensures Optimized planning and utilization

Surgery schedule assists in managing priorities and workload in CSSD

Create orders based on dynamic surgical preferences

Conflict checking and monitoring of surgery schedule and stock availability with feedback to Torin
