Maquet consumables
for anesthesia and ventilation

Original consumables make a difference

This document is intended to provide information to an international audience outside of the US.
In life, nothing is stronger than its weakest link. That is why Getinge Group, with a high regard for quality, offers an extensive set of smart consumables to protect your Maquet device and optimize the clinical workflow.

The genuine Maquet consumables portfolio is specially developed for the highest possible patient safety and ease of use. Our original accessories and consumables ensure the best performance and safety for your SERVO ventilators and MAQUET FLOW-i® anesthesia delivery system. We offer consumables for neonates, pediatrics and adults, and you can choose between reusable and disposable parts.

Choosing genuine Maquet consumables offers a number of advantages:

- Guarantees full capabilities and performance from SERVO ventilators and FLOW-i®
- Fully tested and approved*
- Top quality material and design
- Order Maquet products easily with ongoing availability through your local Getinge Group representative
- Ongoing dependable consumables supply can be assured through optional MCare services programmes
- Dedicated compatibility minimizes risk for unplanned downtime and ensures optimal performance throughout SERVO ventilators or FLOW-i® lifecycles

* Note: not all products listed are available in all countries. For details contact your local sales representative.
Getinge Group offers a full range of high quality consumables for Maquet’s SERVO ventilator platform and FLOW-i anesthesia delivery system:

1. Interfaces
2. Humidification
3. Monitoring and customized performance
It doesn’t matter how advanced the support platform is if the interface linking its capabilities to the patient is compromised. Recognizing this threat to performance and ultimately patient safety, we have designed a full range of masks, breathing systems and circuits and patient-specific interface options expressly for SERVO ventilators and FLOW-i. Each of these options is quality-engineered to ensure ongoing access to the platforms’ key support features while promoting better patient comfort and safety.

Masks
- Soft, lightweight design for maximum patient comfort
- Full range of sizes in reusable and disposable
- Materials for different therapy specific applications
- Intuitive securing and release systems
- Not manufactured with PVC

Breathing systems and circuits
- Lightweight with smooth bore internal design to minimize flow resistance
- Elbow connector with integrated gas sampling port
- Available in variable materials, reusable and disposable for different patient categories from infant to adult

Interfaces for better patient comfort and safety
Humidification and filters
safe and easy to use

Humidifiers
The ideal humidifier provides adequate levels of humidification while maintaining the patient's body temperature. It should prevent the patient from microbiological risk and feature low resistance to flow and low compressible volume, as well as be economic, safe and easy to use. We provide a range of options that meet all of these criteria.

Filters
Filtration of respiratory gases is very important due to the risk of cross contamination. It also lowers costs by making it possible to use breathing systems longer. An ideal filter provides an effective barrier to infected fluids, particularly blood and sputum, protecting patients, staff, equipment and the environment from contamination by airborne as well as liquid-borne bacteria and viruses. It minimizes airflow resistance, even when wet. This substantially reduces the work of breathing for the patient even when the filter has been used for many hours. All of these criteria and more are met by Maquet filters.

The Maquet Servo Duo Guard filter has a filter area that is 20 times larger than a typical standard filter.

The expiratory heater is used for heating the Servo Duo Guard filter at the expiratory limb at the breathing circuit, preventing water condensation in the filter. The filter is kept dry with a low flow resistance which is especially useful when an active humidifier is used.
Continuous monitoring is needed to secure the best therapy for the patient. We offer accessories and consumables for monitoring gas, pressure, flow, CO\(_2\), etc.

For optimized aerosol delivery of drugs during ventilation, a selection of silent micropumps for nebulizers are available; Aerogen\(^\circledast\) Pro for intermittent nebulization and Aerogen Solo for continuous nebulization.

Y sensors for pressure and flow measurements

CO\(_2\) capnostat for measurement of CO\(_2\) concentration

Disposable CO\(_2\) absorber for FLOW-i, with quick change and leak prevention design. Also available as refillable.

Test lungs

Gas sampling tubes and watertraps

And more...
The Edi catheter is a Maquet innovation that is both an integral part of the NAVA® (Neurally Adjusted Ventilatory Assist) mode of ventilation and an important monitoring tool in its own right. Edi detects the electrical activity of the diaphragm, providing ongoing, instantly actionable values – either as exact response from the ventilator (in NAVA mode), or as valuable information for tailoring support manually. Maquet’s Edi catheter is only available from Getinge Group.
In a complex world
we want to be easy to work with

That is why we have MCare.

MCare is a comprehensive and scalable service program
designed to ease ownership throughout your product’s life-
cycle. MCare adds value from day one and ensures that your
system operates at peak performance, allowing your staff to
take advantage of all its features in the best possible way.

Extended information and support from MCare Remote
Services and MCare Portal help you monitor and access
information on your fleet in an easy way.

You will have ongoing access to the Maquet full line of
genuine consumables and parts, designed to keep your
Maquet products performing at its best.
